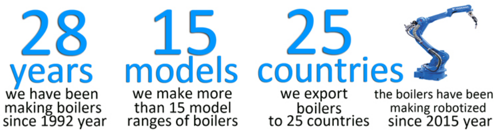
The Wichlacz-UA factory produces the largest range of solid-fuel steam generators, long burning boilers and burners. Burners for automatic fuel supply power **from 10 kW to 10 MW.**

Polish and Ukrainian Wichlacz factories specialists have been producing more than **28 years** the steam and water-heating solid fuel boilers. They have great experience in refitting boilers (gas, diesel, fuel oil, etc.) for solid fuels.



28 years
we have been making boilers since 1992 year
15 models
we make more than 15 model ranges of boilers
25 countries
we export boilers to 25 countries
the boilers have been making robotized since 2015 year

Wichlacz factories has many patents for its engineering (boilers and burners innovations), which haven’t analogues in the world.

The Wichlacz factory produces 5 model ranges of steam generators (and more than 10 model ranges of boilers and burners):

1) Steam generators with manual fuel loading, for working on any solid fuel of large sizes, and combustible production waste.

2) Steam generators with automatic fuel supply fraction of up to 30 mm., (Coal, wood chips, peat, pellets, etc.) with retort burners.

3) Steam generators with automatic fuel supply fraction from 1 to 100 mm. (coal, wood chips, peat, pellets, etc.) with vortex burners – Biopalnik.

4) Automatic steam generators with auto ignition pellet burner, for working on different types of pellets: wood, agropellets, pellets from sunflower husks, pellets from different husk, etc.

5) Mobile solid fuel steam generators on the wheelbase, for quick movement between objects.

+ We produce a range of Economizers - devices designed to extract heat from the flue gases of boilers and generators. It has potentiality to increase equipment productivity by 10-15% for all of our steam generators.
